## Advanced reliability engineering solutions for your industrial assets.

**reducing  
downtime**

**optimise  
maintenance**

**enhance  
performance**

**extend  
lifetime**

CIS Industrial Services is a specialist provider of reliability engineering solutions, helping industries improve asset performance, reduce unplanned downtime, and optimise operational efficiency.

Through advanced diagnostic technologies and data-driven insights, we ensure your equipment performs at its best—every day.

# About us

## About CIS Industrial Services

CIS Industrial Services is a leading provider of reliability engineering solutions focused on enhancing the performance and longevity of industrial assets.

Our expertise lies in advanced analysis techniques such as Motor Circuit Analysis (MCA), Condition Monitoring, Vibration Analysis, Oil Analysis and alignment services.

We partner with clients across various industries to develop proactive maintenance strategies that reduce downtime, increase productivity, and improve operational efficiency.

### Mission

To deliver innovative, data-driven reliability solutions that maximise asset performance and operational efficiency.

### Vision

To be a trusted industry leader in reliability engineering across Africa.

### Core Values

Innovation  
Reliability  
Integrity  
Performance Excellence  
Client Partnership

Predict. Prevent. **Perform**

# Our Services

## About CIS Industrial Services

CIS Industrial Services offers a comprehensive range of reliability engineering solutions designed to improve equipment performance and reduce operational risk.

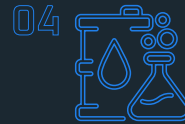

01  
**Condition Monitoring**

02  
**Motor Circuit Analysis (MCA)**

03  
**Vibration Analysis**

04  
**Oil Analysis**

05  
**Reliability Solutions**

06  
**Alignment Services**

## Why Choose Us

- ✓ Advanced diagnostic technologies
- ✓ Experienced engineering team
- ✓ Preventative maintenance focus
- ✓ Reduced downtime & cost savings
- ✓ Trusted across multiple industries

# Real-time Condition Monitoring

Our condition monitoring services provide real-time insights into the health of your equipment, enabling early detection of potential failures.

## What We Do

- Continuous equipment monitoring
- Predictive maintenance strategies
- Data-driven reporting

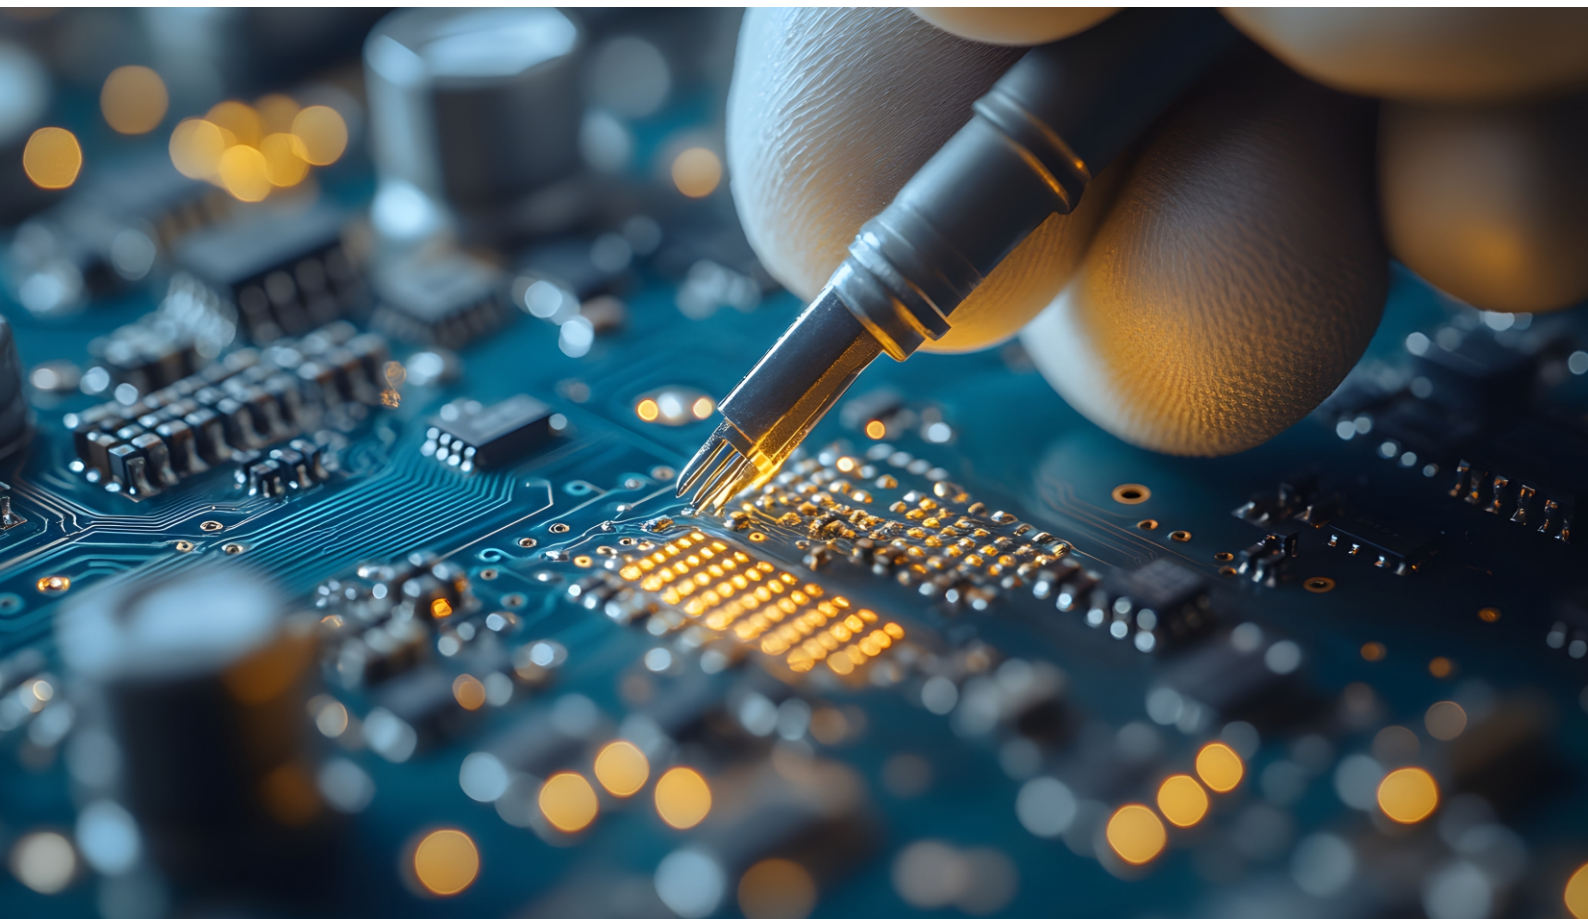

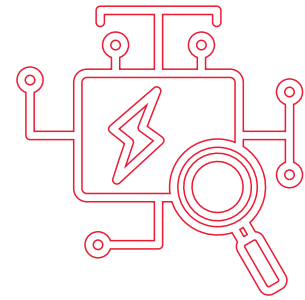

## Benefits

- Reduced downtime
- Improved asset lifespan
- Lower maintenance costs

# Diagnostic Motor Circuit Analysis

Motor Circuit Analysis is a powerful diagnostic tool used to assess the electrical health of motors & identify faults before failure occurs.

## What We Do

- Electrical testing of motors
- Fault detection and analysis
- Performance optimisation

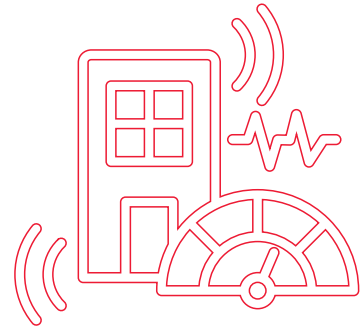

## Benefits

- Prevent motor failures
- Reduce costly repairs
- Improve system reliability

# Complete Vibration Analysis

We analyse vibration patterns in rotating equipment to detect early signs of wear, imbalance & alignment issues to name a few that can result in failure.

## What We Do

- Equipment vibration monitoring
- Fault diagnostics
- Maintenance recommendations

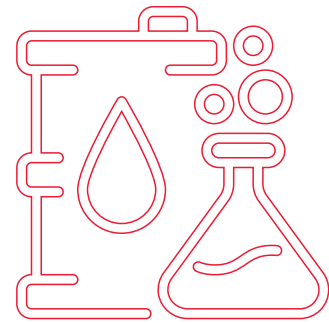

## Benefits

- Early fault detection
- Reduced downtime
- Improved machine performance

# Comprehensive Oil Analysis

Oil analysis provides critical insight into equipment health by examining lubricant condition & contamination levels.

## What We Do

- Oil sampling and testing
- Contamination detection
- Equipment health reporting

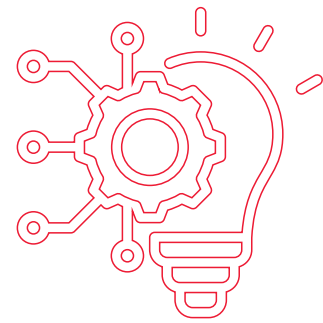

## Benefits

- Extend equipment life
- Prevent breakdowns
- Optimise lubrication practices

# Tailored Reliability Solutions

We develop customised reliability programs based on your operational requirements.

## What We Do

- Maintenance strategy development
- Asset management optimisation
- Reliability consulting

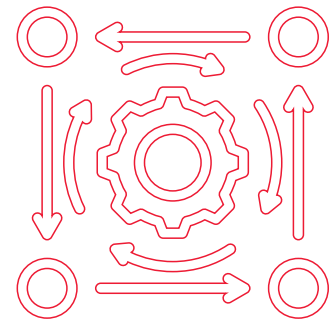

## Benefits

- Increased productivity
- Reduced operational risk
- Long-term cost savings

# Precision Alignment Solutions

We provide specialised alignment services to ensure optimal machinery performance & reliability across your operations.

## What We Do

- Shaft alignment (laser and dial methods)
- Pulley and belt alignment
- Geometric alignment of rotating equipment
- Soft foot detection and correction
- Thermal growth compensation analysis

## Benefits

- Reduced vibration and mechanical stress
- Extended equipment lifespan
- Improved energy efficiency
- Minimised unplanned downtime

Maximise asset performance.  
Optimize operational efficiency.

# Industries We Serve

Manufacturing  
Mining & Construction  
Heavy Industry  
Fast-moving consumer goods  
Energy & Utilities

"CIS Industrial Services has been instrumental in improving our equipment reliability and reducing downtime."
